Araştırma Projelerinde En Çok Karşılaşılan İade Nedenleri / Most Common Rejection reasons for R&D Projects

1. The lack of ethical approval letter and legal/special permission letter or inappropriate format for the documents.

2. Application form and its annexes have not been uploaded in the electronic application system or have not been prepared in the required format,

3. All the parts in the application form have not been filled out or have not contain adequate information for reviewing the project

4. The "project proposal amendment notification form" which is created by the system in line with the information filled out in the electronic application system is empty or does not contain amendments and corrections which were specified in the panel report,

5. Giving the literature review as a raw list without discussing it by giving citations and creating the relevance with the proposal

6. Documents that need to be sent as original hard copies have not been delivered or not been delivered on time,

7. The lack of the signatures of the PI, researcher and rector in the hard copies of "acceptance and commitment statements" and "entitlement declaration form" or lack of original signatures in these documents.

8. Proposing a project just to set up an infrastructure.

9. Proposing a project which does not fulfill the R&D project requirements.
